Growth Plan: 500 Final-Year Registrations in 7 Days

Workshop: "Build Your First AI Project in 60 Minutes" · **Budget:** ₹2,000 · **Author:** Sinchana Shetty

1. Who I'm targeting

Primary persona: "Placement-anxious Priya/Ravi": a final-year engineering student (CSE/IT/AIML first, ECE/EEE second) at a tier-2 or tier-3 college, in the middle of campus placement season.

What they feel	"Everyone says AI, I have no project to show. I'm late."
What they've tried	YouTube playlists, half-finished courses, copy-paste mini-projects
Biggest fear	Being asked "what have you built?" in an interview and having nothing real
Where they live	College WhatsApp groups, club/department groups, Instagram, LinkedIn, Telegram
Who they trust	Classmates and seniors, not ads

Why they'd care: a project is the one thing that moves interview outcomes, and this promises one in an hour, for free.

What makes them register (4 triggers): 1. **Concrete outcome**: "leave with a working project + GitHub link + a resume line", not "learn AI". 2. **Low risk**: free, 60 minutes, no experience needed. 3. **Personal relevance**: the project picker shows *their* branch and *their* topic. 4. **Friends**: a friend sent it and a friend is going.

2. Campaign: 4 channels, no more

Insight: this audience registers when **a peer sends it in a group they already read**. So paid ads get the smallest share of budget and peer distribution gets most of the effort.

#	Channel	What I do	Why it works	Regs
1	**WhatsApp via campus ambassadors**	Recruit 30 final-years (class reps, club leads) via LinkedIn/Instagram DMs. Give each a ready message, poster and a personal tracked link. They post in ~3 groups each.	Trusted sender, group the student already reads, zero cost	**170**
2	**Email to clubs, TPOs and HODs**	AI-personalised email to 200 coding/AI/IEEE clubs and placement cells using public contact pages. Ask for one forward to their student group. Two waves (Day 2, Day 5).	Faculty/club forwards carry authority; ~20% respond	**90**
3	**Referral loop (built into landing page)**	Every registrant gets a personal link + share card. Unlocks: 1 friend = Starter Kit, 3 = Interview Cheat-Sheet, 5 = priority Q&A, top 5 = ₹100 voucher.	Turns each signup into a distributor; the tiers reward small effort	**110**
4	**Social media (Instagram Reels, YouTube Shorts, WhatsApp Status, LinkedIn)**	5 short reels (finished project demo, "pick your project", rewards reveal, before/after resume) made with the Poster Studio + a content pack; ambassadors and campus pages repost; boost the best reel with ₹1,000.	Where students already scroll; reels show the outcome and the rewards in 15 seconds	**130**
			Total	**500**

7-day calendar

Day	Focus
1	Finish page, tracker, posters. Recruit ambassadors. Seed 20 registrations from friends/network. Story teaser.
2	Ambassadors go live. Email wave 1. **Reel 1** + LinkedIn post.
3	Nudge #1 in groups. Share first leaderboard. Check dashboard: which source leads?
4	**Reel 2**; boost the best performer at ₹1,000. Telegram groups.
5	Email wave 2. **Reel 3 (rewards)**. Referral push to existing registrants.
6	**Reel 4**. DMs to ambassadors who are behind. "Last 48 hours" status.
7	**Reel 5**, final call, reminder with joining link to all registrants.

Math (so 500 is not a wish)

- 500 registrations ÷ ~30% visit-to-register (warm, peer-sent traffic) ≈ **1,650 visits** needed.
- Ambassadors: 30 × 3 groups × ~60 members ≈ 5,400 views → ~3% register ≈ 170.
- Emails: 200 sent → ~28 forwards × ~80-member groups → ≈ 90.
- Referrals: ~30% of the first ~390 share and bring ~1 each ≈ 110.

- Social: ~15,000 organic views × ~0.5% register ≈ 75, plus the ₹1,000 boost (~140 clicks at ~₹7, ~35% register ≈ 50) ≈ 125–130. These are estimates; reach varies a lot.
- If a channel runs 30% short, the dashboard shows it by Day 3 and I move effort to the best performer.

Budget: ₹2,000

Item	₹
Top-5 referral vouchers (₹100 each)	500
Boost the best-performing reel (Day 4–5)	1,000
Buffer (domain / tools / replacement vouchers)	500

Everything else is free: AI for copy and personalisation, Canva free, GitHub Pages for hosting.

How I'll know it's working (checked daily in the dashboard)

Registrations per day, source mix, referral share, projected finish. Target by end of Day 3: 150+. If below 100, I cut the weakest channel and re-push the strongest.

---

3. What I built

A **landing page + referral engine + control-room dashboard** (see /landing). Highlights: a lab-themed "Builder ID" sign-up where each student gets a codename and class, personal referral link, ranks that unlock rewards (Recruit → Pioneer), downloadable share card, branch-specific project picker, live seat meter and leaderboard, and a dashboard that tracks channel performance and projects whether 500 will be hit. Plus a **Poster & Caption Studio** (/social) that makes post/story/LinkedIn graphics with the rewards strip, and per-platform captions with tracked links.
